DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art of the record fails to teach or suggest alone or in combination: In a wireless receiver where a radio frequency signal is received, downconverted, and processed into in-phase (I) and quadrature (Q) signal paths, a method of automatic gain control (AGC) comprising: generating at least one digital counter signal responsive to differences between the detected I and Q signal and at least one reference signal; generating a control signal by multiplexing the at least one digital counter signal with the at least one reference signal; and controlling the respective I and Q VGAs with the control signal, as recited in claim 2 and in combination with other steps of the claim.

Claims 2, 4-8 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: In a wireless receiver where a radio frequency signal is received, downconverted, and processed into in-phase (I) and quadrature (Q) signal paths, an automatic gain control (AGC) circuit comprising multiple AGC stages where each of the AGC stages includes: an analog to digital converter (ADC) to convert the detected I and Q output signal to a digital detected I and Q output signal; where the ADC comprises: a multi-level comparator to compare the detected I and Q output signal to at least one reference signal; and a logic circuit to generate at least one digital counter signal responsive to the multi-level comparator; a digital engine to digitally adjust the respective I and Q VGAs

responsive to the digital detected I and Q output signal; where the digital engine comprises: an up/down counter to generate an up/down counter signal responsive to the at least one digital counter signal; and a multiplexer to generate a control signal that digitally adjusts the respective I and Q VGAs by multiplexing the up/down counter signal with the at least one reference signal, as recited in claim 10 and in combination with other elements of the claim.

Claims 10, 12-13 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: A wireless receiver including a plurality of serially connected automatic gain control stages, each stage comprising: an analog to digital converter (ADC) to convert the detect signal to a digital detect signal; where the ADC comprises: a multi-level comparator to compare the detect I and Q signal to the reference signal; and a logic circuit to generate at least one digital counter signal responsive to the multi-level comparator; a digital engine to generate a control signal responsive to the digital detect signal and a reference signal; Where the digital engine comprises: an up/down counter to generate an up/down counter signal responsive to the at least one digital counter signal; and a multiplexer to generate a control signal by multiplexing the up/down counter signal with the reference signal; as recited in claim 20 and in combination with other elements of the claim.

Claims 20-23 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: A method comprising: at each of the stages, converting the respective detect signal to a respective digital detect signal; where the converting comprises: comparing the detect signal to at least one respective reference signal via a multi-level comparator; and logically manipulating the compared signal to generate at least one digital counter signal; at each of the stages generating a respective control signal to control the respective I and Q variable gain amplifiers responsive to the respective digital detect signal; wherein the generating comprises: logically manipulating the compared signal to thereby generate an up/down counter signal; and multiplexing the up/down counter signal with the at least one respective reference signal to generate the control signal, as recited in claim 26 and in combination with other steps of the claim.

Claim 26 is allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
